Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14 and 20, drawn to a device, classified in class 403, subclass 370.
- II. Claims 15-19, drawn to a method of mounting a machine element onto a shaft, classified in class 403, subclass 1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II, as claimed, are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product can mount a shelf to a pole without connecting the outer sleeve to the nut. Further, the method of mounting a machine element onto a shaft, can be practiced with another materially different product, as that shown by Muellenberg, 5,067,847, or Geib, 6,361,243.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Stephen H. Eland on October 12, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
